* NHSE Commissioning Recommendations (v2.0 12 October 2023)

<https://www.england.nhs.uk/publication/commissioning-recommendations-blood-glucose-and-ketone-meters-testing-strips-and-lancets/>

Notes:

Lancets listed above meet N&W recommendation for optimal gauge size (30g) for comfort and sufficient volume of blood for testing (where available as per NHSE-listed products).

Although a higher gauge of lancet is generally less painful, it may not provide sufficient blood for testing.

ONE safety lancet (**Neon Verifine Safety**) is now included in the Norfolk and Waveney list. This is now a *cost-effective option*, to be used *if necessary*.

GlucoRx safety lancets are listed by NHSE but are NOT included as they are more expensive. Neon Verifine Safety lancets may be used where necessary in N&W.

NHSE lists Glucozen lancets (higher cost item); they are NOT supported in N&W as are not linked to any of the meters or lancing devices, and are only available as 28 gauge.
